Figure 1 is a line graph showing the change in the number of individuals in the population of the common reed (*Phragmites australis*) in the Krasnodar Territory. The x-axis represents the 'Year' from 1990 to 2010. The y-axis represents the 'Number of individuals' from 0 to 1000. The graph shows a sharp increase in the number of individuals starting around 1995, peaking around 2005 at approximately 900, and then declining to about 600 by 2010. A legend indicates that the solid line represents 'Number of individuals' and the shaded area represents 'Confidence interval'.
